

Learning Standalone LaTeX in Positron

Madison

1 Why standalone LaTeX?

Unlike a `.qmd` file, a `.tex` file is compiled directly by a LaTeX engine (`pdflatex` or `xelatex`) with no Pandoc step. Positron has no built-in LaTeX compile button, so this file is compiled from the terminal.

2 Some math

$$\hat{\beta} = (X'X)^{-1}X'y \tag{1}$$

3 Try it

In the Positron terminal, run:

```
xelatex demo.tex
```

Then open `demo.pdf` in Positron's PDF/file preview, or reveal it in Finder.
